                                                                                                                                                                                                                                                                                                      This cDNA encodes recombinant plasmid pRep78/52, a trans-acting plasmid containing the AAV sequences that encode rep 78 kD and 52 kD proteins under the control of the AAV P5 promoter. The plasmid also contains an SV40 polyadenylation signal. This cDNA is used in the construction of a hybrid AAV-AV virus vector. The hybrid virus may be used in the delivery and stable integration of a selected gene into the chromosome of a target cell, i.e. gen

```
Plasmid pWRG3196 is a bicistronic plasmid encoding both subunits,
i.e. p35 (see AAW44004) and p40 (see AAW44005), of murine interleukin-12
(IL-12). The p35 and p40 subunits were cloned from a mouse spleen
CIL-12). The p35 and p40 subunits were cloned from a mouse spleen
CIL-12). The p35 and p40 subunits a single cytomegalovirus promoter,
an SV40 splicing donor/splicing acceptor, and bovine growth hormone
polyA signal. Between the p35 and p40 genes is an internal
ribosome entry site element (IRES) cloned from encephalomyocarditis
virus. The backbone of the plasmid is from pUC19. Plasmid
pWRG3139 induces about half the expression of IL-12 as the tandem
vector pWRG3136 (see AAV02042) in vivo and in vitro. A novel method
of treating tumours in a mammal involves delivering copies of an
expressible foreign genetic construct, especially pWRG3169 or
pWRG3196, comprising a promoter operative in the mammalian
cepidermal cells and DNA sequences encoding p35 and p40 subunits of
IL-12 to target cells in vivo. Delivery of the construct allows
IL-12 expression for treatment of solid metastatic or disseminated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Plasmid; cyclic; circular; replicon; exogenous gene; marker gene; transcription termination; immunostimulatory sequence; ISS; antiviral; non-essential nuclectide; molecular biology application; gene therapy; DNA vaccine; cloning; gene expression; in vitro protein production;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Interleukin-12 gene therapy of tumours – comprises delivering construct containing promoter and sequences encoding interleukin-12 p35 and p40 subunit(s) to target cells in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treatment is

promoter, intron, exgenous gene, transcription termination sequence, selectable marker gene, detectable marker gene and an immunostimulatory sequence (ISS), where the non-essential nucleotide sequences have been substantially removed from these vectors. The plasmid DNA vectors are useful in most molecular biology applications, e.g. gene therapy, DNA vaccines, cloning and expression of genes, and in the in vitro production of polypeptides and/or proteins. The present sequence is a commercial plasmid DNA vector pCMVbeta which comprises Cytomegalovirus promoter, simian virus 40 (SV40) intron, the lacz gene, pUC origin of replication and the ampicillin gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /note= "5' non-coding region of lacz gene from pUC18 that corresponds to the non-essential nucleotide sequence that have been removed in the novel DNA plasmid vector"

/note="Vector: pasterialists of the property of the world control of the world population, especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate.

Monocotyledonous rice is a diploid plant (2n=24) with a haploid genome equivalent of 131 Mbp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of Arabidopsis, makes it suitable for genomic studies. In order to facilitate positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza satura, Nipponbare variety using EcoRI as the cloning enzyme. The

library contains 55,296 clones with an average insert size of 121 Kb providing approximatley 15 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9 %. Three high density filters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening and can be requested from the Clemson University BAC/EST Resource Center (www.genome.clemson.edu)."

priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayamar Berg method. The coheained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inote="Organ: Stomach; Vector: pTZ18RP1; Site_1: EcoR1; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA liqase and the first strand CDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The CDNA vector was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EST 06-MAR-2002

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - . This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Gridue du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens
